

Anti-keylogger™

▶ Anti-keylogger

Anti-keylogger™ for Microsoft Windows 2000/XP/2003/Vista provides every computer with strong protection against most types of keylogging programs (software keyloggers), both known and unknown, currently in use or being developed at the present moment.

Our **Anti-keylogger™** is capable to buck various types of keylogging programs possibly included in any commercial, shareware, freeware products, as well as in Trojan horses, viruses of very different operation principles. Due to the **Anti-keylogger™**'s protection spy software will not be able to record and steal your sensitive information, passwords, logins, PINs (Personal Identification Numbers) etc.

Since **Anti-keylogger™** does not use any signature bases, it can protect against even unknown software keyloggers!

Anti-keylogger™ works transparently for the user and silently, asking the user no questions thus excluding user's probability of error when making a decision.

▶ Key features

- No signature base
- Full UNICODE support
- Multiprocessor & hyperthreading architectures support
- Windows 2000/XP/2003/Vista support
- Transparent "on-the-fly" protection
- Instant and constant protection
- Protection against keystroke capturing
- Protection against windows text capturing
- Fast and easy installation and configuration
- Lifetime support for all registered users
- Multilanguage interface
- 30 Days money back guarantee

▶ Solutions

- Anti-keylogger™** has been designed to help you serve a wide range of business and private concerns:
- Prevent identity theft
 - Prevent Internet banking fraud
 - Secure email communication, instant messaging and chat
 - Eliminate leaking of confidential or proprietary information
 - Keep logins, passwords, PINs safe
 - Reduce security breaches
 - Enforce computer and Internet Acceptable Use Policies (AUP)
 - Buck the espionage software of your competitors
 - Guard human ethics and privacy
 - And many other

▶ Benefits

Unlike many existing antispay programs, **Anti-keylogger™** will protect your information:

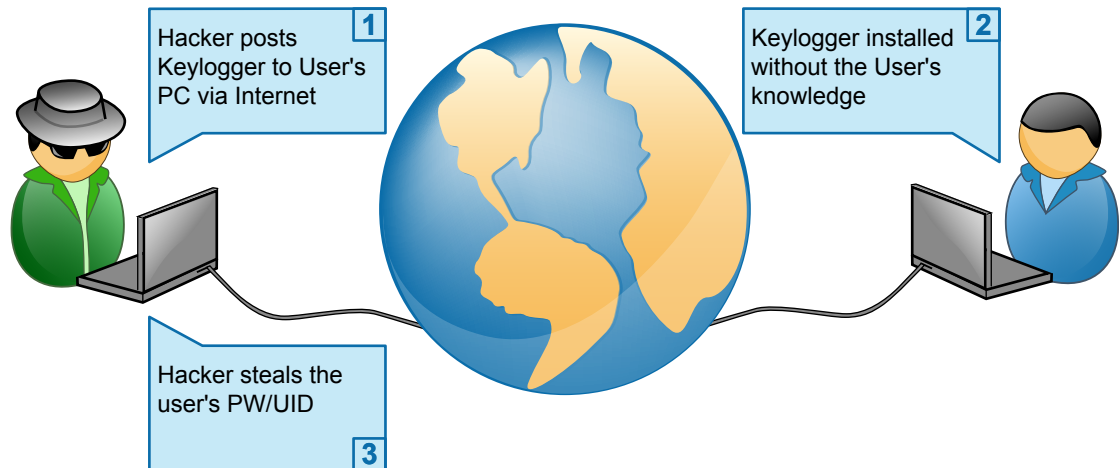

- **More promptly,** because there is no necessity to wait until signature bases have been updated (as it is in antivirus and other programs) while a keylogger-bearing virus steals your sensitive information.
- **More effectively,** because the program works constantly and silently, asking the user no questions thus excluding user's probability of error when making decision.
- **At a lower price,** because you do not need to make annual payments for signature bases updating as with many producers of antispay and antivirus program products.

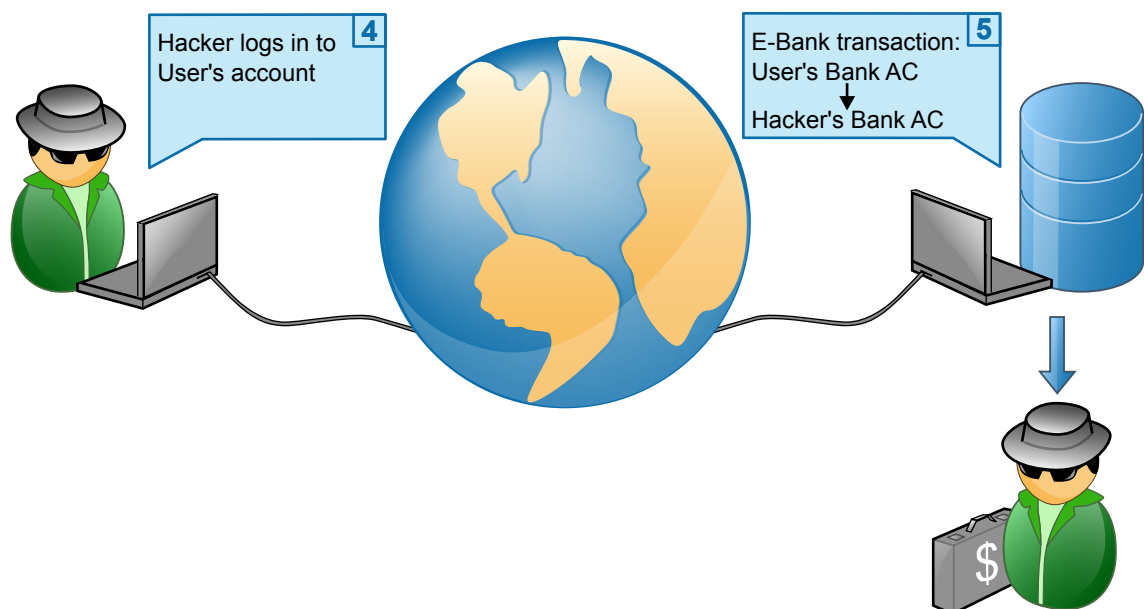

▶ Keylogger Threat

An example of malicious use of a keylogger by a hacker

STEP 1

STEP 2

The User would have protected his sensitive information and prevented the loss of money, if he had used Anti-keylogger™
